Interim MD&A – Quarterly Highlights  
Three Months Ended June 30, 2019

---

## Introduction

This Interim Management Discussion and Analysis – Quarterly Highlights (“MD&A”) has been prepared to provide material updates to the business operations and financial condition of Aston Bay Holdings Ltd. (“Aston Bay” or the “Company”) since its last annual management discussion and analysis, being the Management Discussion & Analysis (the “Annual MD&A”) for the fiscal year ended March 31, 2019. This MD&A does not provide a general update to the Annual MD&A, or reflect any non-material events since the date of the Annual MD&A.

This MD&A has been prepared in compliance with the requirements of section 2.2.1 of Form 51-102F1, in accordance with National Instrument 51-102 – Continuous Disclosure Obligations. This discussion should be read in conjunction with the Annual MD&A, the audited annual consolidated financial statements of the Company for the years ended March 31, 2019 and 2018, and the unaudited condensed interim consolidated financial statements for the three months ended June 30, 2019 and the related notes thereto. All reported amounts are stated in Canadian Dollars unless otherwise indicated. The information contained herein is presented as at August 23, 2019, unless otherwise indicated.

## Description of Business

Aston Bay is a mineral exploration and development company involved in the acquisition and exploration of mineral properties located in North America. Currently, the Company is focused on the Storm Copper and Seal Zinc Project located on Somerset Island, Nunavut, Canada (the “Nunavut Property”) and on its Blue Ridge Project in central Virginia, USA. The Company is exploring copper and zinc prospects on the Nunavut Property and gold prospects on its Buckingham Gold property, a part of the Blue Ridge Project.

## Discussion of Operations

### Exploration Activities

In April 2019, the Company conducted a drilling program at its Buckingham Gold property within the Blue Ridge Mining Project area located in central Virginia, USA. Six large diameter (HQ) diamond drill holes totaling 878 metres (“m”) were completed with the results presented in Table 1 below. Drill hole locations with significant gold intercepts are illustrated in Figure 1; a longitudinal cross section is presented in Figure 2.

All six drill holes intersected significant near-surface gold mineralization, either in quartz veins or in wider zones of sericite-quartz-pyrite alteration, both interpreted to represent a mineralized zone dipping steeply from the surface. This outcropping zone sits within a much larger gold-in-soil anomaly, suggesting the potential for a much larger system concealed under cover.

The drilling targeted an area in which visible gold had been identified and sampled, followed by limited but successful drilling completed by a previous owner. That previous program consisted of three holes on the Buckingham Property, all of which intersected significant gold, including 15.57 g/t Au over 4.1m and 11.69 g/t Au over 3.1m. In addition to gold-bearing quartz veining, the previous drilling intersected a zone of sericite-pyrite alteration yielding 0.4 g/t Au over 24m including 0.71 g/t Au over 13.72m (all historic intercepts are core intervals, i.e., not true width; see March 4, 2019 Aston Bay press release).

The Aston Bay drill program was designed to test along strike and down dip from the northwest-southeast trending area of boulders and sub-crop of quartz veining, as well as test for zones of gold-bearing alteration.

### Outlook

#### *Storm Copper and Seal Zinc Project*

The Company is encouraged by the discovery, during its 2018 drill program, of zinc mineralisation coincident with Polaris-type pseudobreccia that is spatially associated with a gravity anomaly at Seal South. Multiple anomalies remain untested here, in the vicinity of the Seal deposit and to the north.

The Company believes that the results demonstrate that we now better recognize the signatures of both copper and zinc mineralization in our data; results at Storm will provide impetus for continued improvement of geophysical modeling, and refinement of drill targets for the next program. In particular, the Company is investigating the potential that some of the large gravity anomalies delineated by the initial CGG geophysical processing may in fact be within a depth that can be reached economically with the drill. These anomalies correspond well to both the known geology and the conceptual geologic model, making them large, compelling targets for potential follow-up drilling.

Preparations for a follow-up exploration drill program have been made: both diamond drill rigs used in the program are stored at site, tents and structures at the exploration camp remain in place and drilling salt has been delivered by sea lift to Resolute Bay.

#### *Blue Ridge Project*

The Company plans to expand on the current results with comprehensive geochemical and geophysical programs designed to inform targeting for a further subsequent proposed drill programs.

Several additional land access agreements over areas covered by the Blue Ridge Project are currently in advanced stages of negotiation.

### **Liquidity and Capital Resources**

The Company generates cash primarily through financing activities. During the three-month period ended June 30, 2019, the Company did not undertake any financings. At June 30, 2019, the Company had cash of \$14,144 and a working deficit of (\$159,429).

As at the date of this MD&A, the Company does not have any material outstanding commitments.

In the near term, the Company expects to undertake a financing that will enable it to conduct a follow-up drill program at its Buckingham Gold property. The Company is involved in early stage exploration and data analysis. It has no current sources of revenue and does not anticipate receiving revenue in the foreseeable future. It is highly likely that it will continue to depend on equity financings in the future. The availability of future funding will depend on factors that include market conditions and the Company's exploration results.

### **Related-Party Transactions**

Related-party transactions are detailed in Note 4 to the unaudited condensed interim consolidated financial statements for the three months ended June 30, 2019. These transactions are for the provision of services to the Company by officers and directors of the Company, or parties related to those individuals through which services were provided. The transactions were in the normal course of business and were measured at the exchange value.

### **Risks and Uncertainties**

The Company's principal activity is mineral exploration. Companies in this industry are subject to many and varied kinds of risks, including but not limited to, discovery, environmental, metal prices, political and economic.

Although the Company has taken steps to verify the title to mineral properties in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee the Company's title. Property title may be subject to unregistered prior agreements or transfers and title may be affected by undetected defects.

The Company has no significant source of operating cash flow and no revenues from operations. None of the Company's mineral properties currently have reserves. The Company has limited financial resources. Substantial expenditures will be required to be made by the Company in order to establish ore reserves, which is not a guaranteed outcome.

The property interests owned by the Company are in the exploration stages only, are without known bodies of commercial mineralization and have no ongoing mining operations. Mineral exploration involves a high degree of risk and few properties which are explored are ultimately developed into producing mines. Exploration of the Company's mineral exploration may not result in any discoveries of commercial bodies of mineralization. If the Company's efforts do not result in any discovery of commercial mineralization, the Company may be forced to look for other exploration projects or cease operations.

The Company is subject to the laws and regulations relating to environmental matters in all jurisdictions in which it operates, including provisions relating to property reclamation, discharge of hazardous material and other matters. The Company may also be held liable should environmental problems be discovered that were caused by former owners and operators of its properties and properties in which it has previously had an interest. The Company conducts its mineral exploration activities in compliance with applicable environmental protection legislation. The Company is not aware of any existing environmental problems related to any of its current or former properties that may result in material liability to the Company.

The Company currently has a working capital deficit and incurs significant expenses on an on-going basis by virtue of being a public company, and this represents a significant risk factor. The Company will therefore require additional financing to carry on its business, and such financing may not be available when it is needed.

### **Forward-Looking Statements & Cautionary Factors that may Affect Future Results**

This MD&A may contain "forward-looking statements" which reflect the Company's current expectations regarding the future results of operations, performance and achievements. The Company has tried, wherever possible, to identify these forward-looking statements by, among other things, using words such as "anticipate," "believe," "estimate," "expect" and similar expressions. The statements reflect the current beliefs of the management of the Company and are based on currently available information. Accordingly, these statements are subject to known and unknown risks, uncertainties and other factors, which could cause the actual results, performance, or achievements of the Company to differ materially from those expressed in, or implied by, these statements. Historical results of operations and trends that may be inferred from the following discussions and analysis may not necessarily indicate future results from operations.
